REPLACEMENT BATTERIES

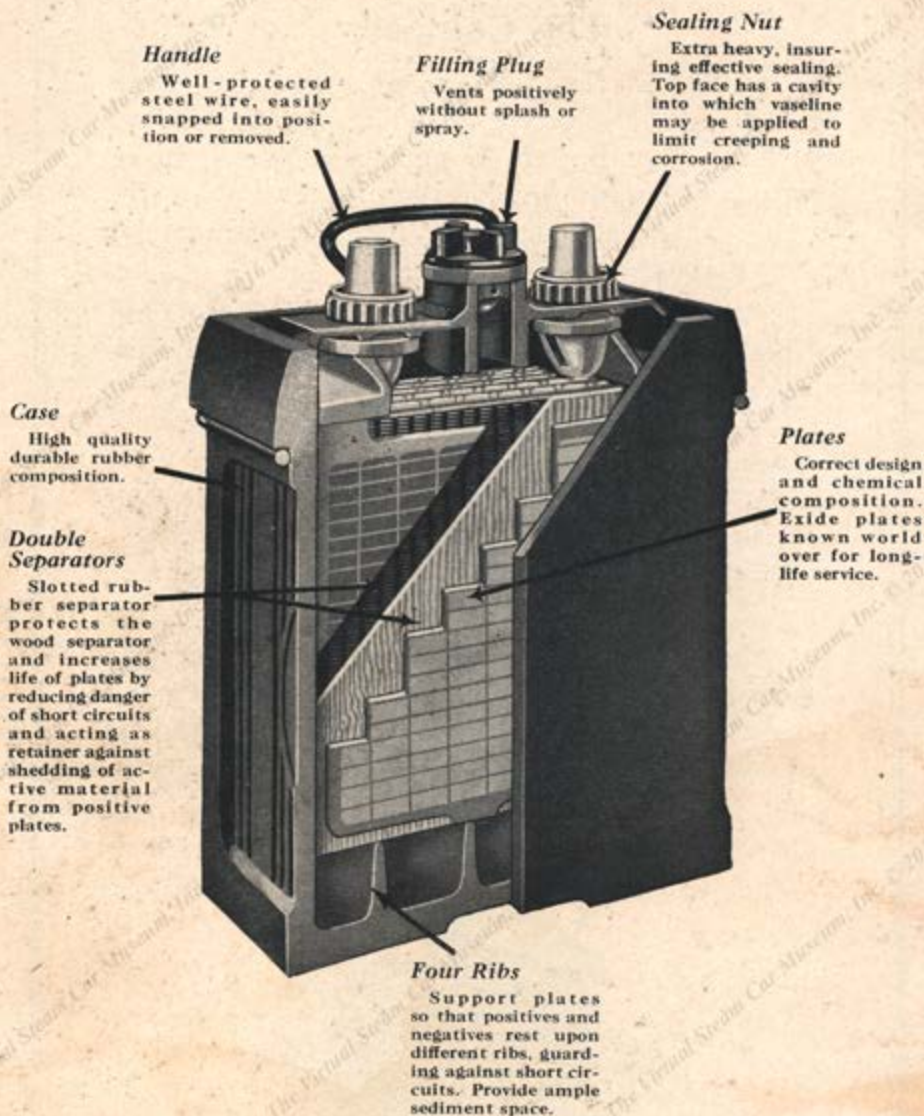

1927

THE ELECTRIC STORAGE BATTERY CO.,
PHILADELPHIA

*World's largest manufacturers of storage batteries
for every purpose*

Fourteenth Edition

May, 1927

Sectional View of a Typical Exide
Automobile Battery Showing Construction Details

TYPE XCR

THE ELECTRIC STORAGE BATTERY CO.

The Company

DURING the thirty-nine years that have elapsed since the founding of The Electric Storage Battery Company in 1888, the organization has grown consistently until it is the world's largest manufacturer of storage batteries for every purpose.

Its main factories provide more than thirty acres of floor space devoted solely to the making of storage batteries; its branches are located in seventeen cities and its branch assembly depots and warehouses in twenty-four cities. With its affiliated companies in foreign countries and over nine thousand official sales-service stations, there is distribution of its products wherever storage batteries are used.

This is the organization that is behind the Exide Starting and Lighting Battery—an organization whose wide experience, whose broad policies and whose co-operation with its customers, have made it the dominating figure in the storage battery industry.

An Exide Battery for
Automobile Starting, Lighting and Ignition
TYPE XCR

EXIDE REPLACEMENT BATTERIES

The Product

EVERY day everybody uses Exide Batteries. Dependable and long-lived, they are to be found giving unfailing service in many of the more important activities of the industrial and social life of the nation. They are used in the starting, lighting and ignition of a majority of the automobiles in the country. In telephoning, the current which carries the voice over the wire is almost sure to be supplied by an Exide Battery. Modern mining operation requires the use of Exide-equipped electric locomotives.

Drawbridges and electric street vehicles; train lighting and farm lighting; radio, both commercial and broadcasting; battleships, submarines, airplanes and dirigibles; great electric power and lighting services—all of these are but part of the applications in which Exide is recognized as the standard.

This record of achievement is based upon a continuing practice of producing a uniformly high quality battery. In the building of Exide starting batteries for automobiles it is the aim to consistently meet every requirement of maximum cranking ability, long life and dependability, with low cost to the user.

A Typical Exide Truck Battery
TYPE LXRE

THE ELECTRIC STORAGE BATTERY CO.

INDEX BY MAKES and EXIDE REPLACEMENT BATTERIES RECOMMENDED

The following abbreviations are used to indicate the service for which the vehicle is designed:

(P) Passenger Car	(T) Truck
(B) Bus or Motor-Coach	(Tr) Tractor
(TC) Taxicab	(FA) Fire Apparatus
(MC) Motorcycle

*For the Wills-St. Claire a special assembly of type 3-XXV-19-2 is recommended. By reversing the position of the covers on the standard assembly of this battery it is made possible to properly install the battery with the positive terminal toward the engine and yet have the vent plugs accessible for testing.

A Typical Exide Battery for Motor-Coach Service

*Data for other sizes of Typox KXK and MVE batteries will be found in Bus Battery Supplement to Section RB.

THE ELECTRIC STORAGE BATTERY CO.

TERMS

Terms are net, 30 days. New customers, unless satisfactorily rated by the commercial agencies, should send references with their first order, and a brief statement of their financial condition. This will enable this Company to act promptly. To avoid the slight delay necessarily occasioned by taking time to make the usual inquiries of reference, the Company is always glad to ship by express C. O. D. or by freight subject to sight draft against bill of lading, in the meantime writing to any references in view of future orders.

WHEN ORDERING, NOTE THE FOLLOWING

Prices are net to users, are for material packed for domestic shipment and are for delivery F. O. B. cars at works, Allegheny Avenue and Nineteenth Street, or Crescentville, Philadelphia, Pa., or F. O. B. the Exide Depots specified on Price Sheets.

Electrolyte is shipped in jugs or carboys, for which a net charge is made. Credit will be allowed in full for these containers only when returned in good condition within sixty days from date of shipment, charges prepaid; to address furnished by The Electric Storage Battery Company upon application.

Always order by Catalogue Number.

This Company is not liable for damage to goods in transit; its responsibility ceases when it delivers the material in good order to the transportation company. All claims for damage in transit should be made against the carrier.

THIS SECTION SUPERSEDES ALL PREVIOUS ISSUES.
FOR PRICE INFORMATION, SEE NET PRICE SHEET.
PRICES SUBJECT TO CHANGE WITHOUT NOTICE.
